

PS SERIES PSVA6UTPU115P1200-X VPX AC/DC POWER SUPPLY

- Vita 62 compliant
- 6U VPX form factor
- Six outputs
- AC/DC converter
- Up to 1200W

Special Features

- VITA 62/6U
- High efficiency
- Input / Output isolation
- Remote sense
- EMI filters included
- Fixed switching frequency
- I²C/IPMI communication
- External Inhibit & Enable
- Parallel configuration
- Indefinite short circuit protection with auto-recovery
- Over-voltage shutdown with auto-recovery
- Over temperature shutdown with auto-recovery

Current Sharing

Optional for VS# Outputs

ACS or PCS

EMC

Designed to meet MIL-STD-461F

CE102, CS101, CS114, CS115 & CS116.¹

Ripple and Noise

Less than 50mV_{p-p}, typical (max. 1%), measured across 0.1μF and 10μF on Load

Load Transient Overshoot and undershoot

Output dynamic response up to 5% at step load of 60%-90%. Output return to steady stated within 300-500μSec

Efficiency

Typical 89% (Nominal line, nominal load, room temperature)

System Management

I²C/IPMI protocol available voltages, currents and temperature for all voltages (GAX, SCL, SDA)

Power Factor for ≥ 0.87 (Full load)

1. CE102 Deviation under 50KHz. Contact company for available options

*P01 and P02 outputs can be connected in parallel to achieve a single 12V/70A output

Markets & Applications

Military : airborne, ground-fix, shipboard

Ruggedized, Telecom, Industrial

Functions and Signals (according to VITA 62.0)

Signal Name	Type	Description
FAIL*	Output	Indicates to other modules in the system that a failure has occurred in one of the outputs. Please refer to Figure 2 ¹
SYSRESET*	Output	Indicates to other modules in the system that all outputs are within their working level. Please refer to Figure 2 ¹
INHIBIT*	Input	Controls power supply outputs. This signal in conjunction with INHIBIT controls the outputs. Please refer to Table 1 and Figure 1 ¹
ENABLE*	Input	Controls power supply outputs. This signal in conjunction with INHIBIT controls the outputs. Please refer to Table 1 and Figure 1 ¹
GA0÷4*, GAP**	Input	Used for geographical addressing. GA2 is the most significant bit and GA0 is the least significant bit. ¹
SCL, SDA	Bidirectional	I2C bus Clock and Data respectively. Through this bus the voltage and temperature readouts can be shared. ¹
REF_CLK	Input	The REF_CLK signal is used to allow the power supply frequency to sync with the system frequency. ¹
VOUT SENSE	Input	The SENSE is used to achieve accurate load regulations at load terminals (this is done by connecting the pins directly to the load's terminals).
Alert Bit	Output	Indicates to other modules in the system about Input Voltage loss. Please refer to Figure 2 ¹
Active Current Share	Bidirectional	Support Active current share between Outputs. See Current Share para. ^{1 2 3}
PO#_SHARE	Bidirectional	Support Passive current share between Outputs ¹

- Notes:
1. Signal referenced to **SIGNAL RTN**.
 2. When not used leave open
 - 3 In Passive or Non-Current share Current Share configuration, this pin is Internally Disconnected.

Detailed Information

1. Input Voltage Operation.

The PSVA6UTPU115P1200-X steady state operation is per Mil-STD-704. Unit will work through all Normal Transients per Mil-STD-704 B-F, protected to all other transients and interrupts.

2. Outputs Voltage Regulation

The PSVA6UTPU115P1200-X contains accurate internal sense lines to keep output voltage at less than 3% regulation for all Line / Load and temperature range (see Table 2).

Output	12V/25A	5V/30A	3.3V/20A	3.3VAux/5A	12VAux/1A	(-)12VAux/1A
Voltage Range	11.85 – 12.15	4.9 – 5.1	3.28 – 3.42	3.2 – 3.4	11.65 – 12.15	(-)11.85 – (-)12.15

Table 2: Outputs voltage regulation. Temperature -55°C – 85°C

2.1 Sense Lines

Sense Lines are provided for VS1, VS2 and VS3 output to compensate line voltage drop.

Sense Lines proper connection is shown in Figure 3.

Each VS# output has its own *Sense Lines*, additional common *Sense RTN Line* is provided for all VSx Outputs (VITA 62 Standard).

Contact Factory for Sense configuration different than the VITA 62 standard

Note: when two or three VS# have the same configuration (e.g. VS1 and VS2 are both 12V), sense lines of those outputs will be shorted internally.

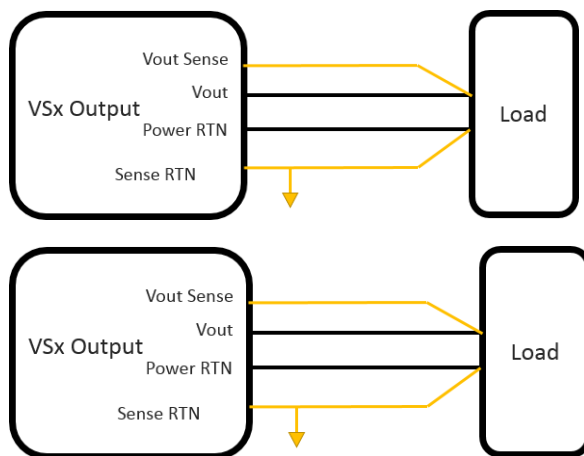

Figure 3: PSVA6UTPU115P1200-X Sense line connection

3. Current Share (C.S)

Two VS# outputs can be configured as current share to double the output current.

It is also possible to support parallel configuration of two units. VS1, VS2 and VS3 will current share with about 5-10% load balance.

All Aux Outputs can be paralleled, but would not support current sharing.

The unit can support two methods of current sharing:

3.1 Passive Current Sharing (P.C.S)

Current sharing is done in open loop, output voltage drops as a function of output load.

For Output to be P.C.S, PO#_SHARE Pins should be connected between two units.

3.2 Active current sharing (A.C.S)

Current sharing is done in a closed loop. All paralleled outputs are compared and feedback is used to balance their load current. The result is a more stable, less sensitive output voltage without voltage drop.

3.3 Current share connection between two Units.

3.3.1 Passive Current Share:

For a required output to P.C.S please connect the following Pins between the two units

- PO#_Sense & PO#_Sense_RTN
- PO#_SHARE

Note: if two outputs of a unit are configured as paralleled, the Pins above are internally shorted.

3.3.2 Active Current Share:

For a required output to A.C.S please connect the following Pins between the two units

- PO#_Sense & PO#_Sense_RTN
- PO#_SHARE
- PO#_ACS

Note: if two outputs of a unit are configured as paralleled, the Pins above are internally shorted

Typical ACS Dynamic Load of Two 12V Paralleled Outputs

Note 1: When Not used, A.C.S can be left open.

When ordering P.C.S or Non-Current Share unit, those pins are Internally disconnected

Communication Supported

Read Command – 21Hex, deliver 64Bytes of Data. (More commands are available by request)
 The communication starts when the master sends a start followed by the unit slave address, command, checksum and a stop. A second start followed by the slave address and a read will be followed by a 64 Bytes response.
